

# ENERGY EFFICIENCY ALBERTA

Energy Efficiency Alberta is a new provincial agency providing programs and services to help Albertans save money and energy.

## Energy efficiency, the easy way

The Residential No-Charge Energy Savings Program offers direct, no-charge installation of energy efficient products across the province, in rural and urban houses, apartments and condos. Whether you own or rent your home, an Energy Efficiency Alberta installer will visit your home and conduct a walkthrough to identify potential opportunities for energy-efficient upgrades at no charge. Most homes can be upgraded in about an hour.

## How does it work?

Getting your no-charge, energy-efficient products is easy:

1. Fill out [the form](#) to register at [www.energycalberta.ca/residential-no-charge](http://www.energycalberta.ca/residential-no-charge)
2. You'll receive a call to schedule your installation, and a second call from the installer the day prior to their visit.
3. An installer will visit your home, and conduct a walkthrough to identify potential opportunities for energy-efficient upgrades at no charge.
4. The installer will upgrade your home to energy-efficient products, and show you how to use them. Most installations don't take longer than an hour.
5. You'll save money and conserve energy—immediately. And the products are yours to keep at no charge!

## What kinds of products are included?

All Alberta households are eligible to participate regardless of income or housing type. Installation will be conducted by qualified installers who schedule home visits. Installers will remove old products and replace them with more energy-efficient products, such as:

- Replacing existing incandescent nightlights, lightbulbs and exit signs with LED products
- Replacing inefficient shower heads with high-efficiency shower heads
- Installing faucet aerators if no aerator is present
- Replacing a traditional power bar with an advanced power bar
- Replacing a non-programmable thermostat with a smart (self-adjusting) thermostat

## When will the program launch?

Installations will begin in early April 2017, but you can sign up now to be among the first people in your area to get energy-efficient products at no charge.
